Description

With increasing pressure on operator revenues, international traffic and roaming can be a significant source of revenue for operators - and a significant source of costs. It is therefore essential to approach these activities as businesses and to focus on driving as much revenue and margin as possible from the traffic. This 5-day training course teaches participants how to approach the management of international traffic & roaming as a business: by finding ways to improve revenues and reduce associated costs. The course includes discussions and analysis of the current market and of potential strategies and tactics available to increase profits.

Learning Outcomes

At the end of the course, participants will be able to:

- Approach international traffic management and roaming as business opportunities and negotiate more advantageous agreements
- Use a business case approach to improve revenues and reduce costs associated with international traffic management and roaming
- Apply international traffic analysis skills to help identify opportunities for increased profits
- Apply potential strategies and tactics to be used on a short and long term basis to increase profits
- Understanding potential strategies and tactics to be used on a short and long term basis to increase profits

Topics*Note: the course structure may be subject to change as trainings are updated on a regular basis. DAY 1
